To whom it may concern,
I can't understand why I would not be able to obtain traffic and weather from XM radio. I purchase XM over a year ago when there were only about 150,000 subscribers. I am delighted with the benefits of satellite radio and consider it the wave of the future. If the National Association of Broadcasters was not wise enough to realize that they are now the dinosaurs of radio, it's not my fault. I want weather and traffic on my XM and as a consumer I feel I should have that right. I pay for it.

I, for one, request that you reject petition 04-160.

Thank you

K. Dean Russell
